Reviewer comment	Author response	Modification (include page and line number)
Rev 1 – The authors fail to state a testable hypothesis in the Introduction.	We regret this omission as a hypothesis is an important part of the scientific method.	We modified the last paragraph of the Introduction (page 4, lines 15-20) to state: “We hypothesize that people who exercise more will have lower blood sugar. Further, we propose that this relation will be modulated by lower amounts of body fat”.
