Supplementary Figure S2. Changes observed in the composite layers of the macula.

Data are shown in the total macular area (T), the central subfield (C), the inner (I) and outer ring (O). *: $p < 0.05$ (missed significance), **: $p < 0.01$ (missed significance), ***: $p < 0.001$ (significant). The $p$ values indicate the results of the post hoc Dunnett test in the case of significant (bold) or missed significant (tilted #) ANOVA test. For mean and SD values see Table S5. (For the abbreviations of the layers see Figure 2.)
